ENAiKOON

ENAiKOON driver-id

Personnel and driver identification system

ENAiKOON driver-id is an inexpensive and durable driver and personnel identification system, which attaches to the ENAiKOON remote control units ENAiKOON locate-04 and ENAiKOON locate-06. This technology can be used for multiple purposes:

- **Access control**
  only authorised personnel will gain access (e.g. to use a machine, access a room etc). Without attaching their iButton to the reader, the employee cannot start the machine or open the door.

- **Time recording of mobile workers**
  the mobile worker attaches the personal iButton to the iButton reader to clock in and out, at the beginning, break, and the end of their shift, in order to obtain accurate work hours and access specific areas

- **Assignment verification**
  with the iButton technology, you can ensure, that only authorised personnel can conduct specific assignments (e.g. machine operators can only operate machines, for which they have proper authorisation to use like proper training and certification). Assignments can be handled from any PC with internet access.

ENAiKOON driver-id is fully supported by the ENAiKOON M2M-commserver as well as inViu pro, the internet based fleet management software from ENAiKOON. To use this hardware in inViu pro the plugin ENAiKOON staff-tracker is needed.

The driver-id system is made up of hardware and software components:

- driver-id reader
- iButton
- ENAiKOON staff-tracker

The driver-id readers

driver-id reader with 1 sensor

This single-sensor iButton reader can easily be mounted to a vehicle's dashboard, because of its simple construction.

It can also be mounted outside of a vehicle due to it's weather resistance. This allows the reader to be used like an attendance recorder, even if the machine operator is not present.

The built in LED indicates that a reading process was successful. Optionally, a piezo buzzer can also be used for the same purpose. The reader is affixed with a counternut.

driver-id reader with 2 sensors

This iButton reader comes with two sensors, allows the attachment of two iButtons simultaneously. This can be used to identify the driver and co-driver, which vehicle they drove, and the duration of vehicle use.
The iButton

The iButton is an integrated electronic key fob, installed with a unique, indestructible global ID number. It's light weight and can be easily attached to a key chain.

ENAiKOON staff-tracker

The ENAiKOON staff-tracker helps you with the management of your mobile employees by organising their tasks and facilitating their performance reviews while giving employers the ability to process the data collected for payroll and accounting purposes.

Products and prices
