

The telematic specialist ENAIKOON introduces a new GPS device from their locate-series

ENAIKOON locate-15, the longest lifespan of any tracking device in the world

ENAIKOON locate-15 is a GPS device equipped with two powerful and self-sustainable batteries. It is the ideal tool to locate stand alone machines or vehicles.

The rugged and waterproof casing is only 15x8x4 cm big and weights 480 g. It is possible to fix it easily to any machine via four optional magnets that can withstand up to 34kg of pressure.

With one GPS position sent per day, the batteries can last for over 10 years, receiving more positions is possible and can be manually programmed. If the box is installed on a machine with lots of vibration, the box can also be internally fitted with a special vibration-resistant resin. The lifespan depends on the ambient temperature as well as the amount of positions and reports requested.

ENAIKOON locate-15 has a discrete design and can be firmly bolted to surfaces or held fast with magnetic feet.

The user can connect through any internet connection to the ENAIKOON fleet-control-web portal and instantly begin tracking. With ENAIKOON telematic system, one has full control over his assets and can protect them against loss and theft.

It can also be applied to trailers, containers or any construction machinery.

Machinery is smaller but is necessary to get the job done. Often left on the wrong construction site or lost, it is important to keep a track on them. From now on, you can retrieve the equipment you need urgently from neighboring construction sites and get them immediately. There is no more searching. Just glance at the web portal and accurately locate your equipment. For location or monitoring purposes, ENAIKOON locate-15 guarantees a return on investment and increased efficiency.

ENAIKOON presentation

ENAIKOON offers advanced telematics solutions such as in-vehicle terminal assistance, automatic vehicle identifier systems, incident detection systems, fleet operation management systems, remote vehicle diagnostics, and much more. Being one of the leading service providers, our servers monitor over 25,000 mobile objects.

Our technology supports SMEs within the transportation and construction industries such as FLD food logistics, Eberle-Hald and other delivery companies. Also, organisations such as the United Nations, Deutsche Bahn and Deutsche Post utilize ENAIKOON systems.

We are involved in precision traffic reports and management together with ADAC, Germany's largest automobile club. ENAIKOONs hardware is manufactured exclusively in Europe and the software is constantly being developed and adapted to each clients specific needs.

ENAIKOON is probably the provider with the widest range of GPS/GPRS devices in Europe. In addition, ENAIKOON has a range of devices with the Inmarsat technology designed to locate and track in areas where no mobile network is available.

Thanks to this diversity and know-how, ENAIKOON received again the "Vodafone SolutionPartner Preferred" status.
